Resources & FAQs

Q. How do I horizontally center a div with CSS?

A. Give it a fixed width (e.g. {width: 450px}) and then set its left and right margins to “auto”. You can do that with one declaration: {margin:0 auto}

Q. Where can I find a list of CSS properties and their effects?

A. W3Schools (<http://www.w3schools.com/cssref/default.asp>) has a very in-depth list of CSS properties. For more specific questions, StackOverflow is a good place to start: (<http://stackoverflow.com/questions/tagged/css>)

Q. What’s the craziest thing I can do with CSS?

A. ZURB has some pretty cool examples... and they tell you how to do it too! (<http://zurb.com/playground/css-boxshadow-experiments>)

Q. Where do I go from here?

A. So you have a static personal site! Great! Now what? Try emulating the techniques used in the websites that appeal to you. You can check out the HTML/CSS on any given web page with Google Chrome’s “Inspect Element” tool (it’s invaluable!) The best way to learn is by doing, so go out there and make a website for a friend or student organization!
